

珠光颜料 Pearlescent Pigments

天然云母珠光颜料是以处理过的天然云母薄片为基材，包覆金属氧化物如二氧化钛、三氧化二铁等形成的经典效果颜料。通过对透明度、折射、多重反射、粒径大小和包覆厚度等一系列组合的控制，产生各种存在于自然界的不同色彩效果，

例如银白、金属光泽、虹彩等。珠光颜料能与透明和半透明体系很好的相融，具有易分散、耐光、耐温、不迁移、不褪色、不导电、不可燃等特点，安全无毒，广泛用在涂料、印刷油墨和塑胶等领域。

Natural mica pearlescent pigments are classical effect pigments composed of natural mica flakes which are coated with metal oxide. By controlling the particle size, coating thickness, transparency, refraction, multi-reflections, a wide range of perfect natural color effects are achieved, such as silver white, interference and metallic luster. Pearlescent pigments are compatible with transparent and translucent systems and easy to disperse with excellent lightfastness, thermal stability, chemical resistance, migration resistance, non-conductive, non-flammable and non-toxic. They are widely used in paints/coatings, printing inks and plastics.

Crystal pearlescent pigments are composed of synthetic mica flakes coated with metal oxides. By accurate control of particle sizes, hydrolysis process and finer raw material treatment, crystal series offer superior brightness, luster, sparkling effects to their natural mica counterparts, bringing more options with stunning properties for applications in paints/coatings, printing inks, plastics and cosmetics.

水晶系列珠光颜料是以合成云母为基材，通过有效的粒径控制和先进的水解技术包覆金属氧化物加工而成，水晶系列具有比天然云母珠光颜料更高的亮度、鲜艳度和光泽度。其更好的适用性为涂料、油墨和塑胶、化妆品等领域提供了更多的效果选择。
